www.davitl.com | <https://github.com/Lursmani>

Software Engineer with 5 years of experience building front-end products across web and mobile, with a focus on front-end using Next.js and React Native. I've worked on data-heavy platforms, energy monitoring tools, and IoT integrations, with experience spanning redesigns, migrations, and production-critical systems. Fully bilingual in English (C2) and Dutch (B2).

Technical Skills

Front-end: JavaScript, TypeScript, React, React Native, Next.js, Figma, HTML, CSS, Tailwind, SASS.

State & Data: Redux, React Query, SWR, GraphQL, Context API.

Back-end: SQL, NodeJs.

Tools & Platforms: Git, GitHub, CI/CD, Jenkins, Vercel, Sentry, Contentful, Github Copilot.

Languages: English (C2), Dutch (B2), Georgian (Native), Russian (B2).

Professional Experience

Software Engineer | Aurum Europe, Breukelen

03/2023 – Present

- **Rapid Redesign:** Led the full redesign and refactor of the EnergyFlip app across web and mobile, covering 22k+ lines of code and multiple complex data visualizations. Delivered the implementation end to end in four weeks, including late client changes, and prepared it for white-label use.
- **Next.js Modernization:** Migrated the EnergyGrip web platform from class components, Redux, and the Pages Router to the Next.js App Router, improving performance and making the codebase easier to extend.
- **Process Engineering (ISO 9001):** Built a company-wide tracking system for a multi-thousand-unit RMA recall, clearing a year-long backlog in three months and helping support ISO 9001 certification.
- **Hardware Integration:** Implemented remote bi-directional control for Modbus/M-Bus devices, enabling real-time register reads and writes for hardware demos and internal testing.

Front-End Developer | Label A, Amsterdam

06/2022 – 03/2023

- Engineered scalable web applications for high-profile clients including Nationale

Nederlanden, DPD, and PON using Next.js, Gatsby, Strapi, and Contentful to deliver robust, scalable client solutions.

- Consistently delivered high-quality releases within fast-paced agency environments across multiple concurrent projects, while ensuring smooth communication and feedback between clients and the development team through frequent direct contact.

Front-End Developer | Universal Transit, Tbilisi

07/2021 – 05/2022

- Solely responsible for developing the front-end of the logistics dispatching platform using Material UI, ensuring seamless integration with complex backend APIs.

Education & Certifications

- **Meta Advanced React Certification**
- **FreeCodeCamp Front-End Libraries Certification**
- **International Relations, Bachelors:** International Black Sea University (Studied entirely in English)
- **Business Management Minor:** Amsterdam University of Applied Sciences
